Generator Operator’s Manual
INTRODUCTION

Thank you for purchasing products from Falconpower. We appreciate your business. Our generator is driven by a compact air-cooled engine with high performance, which can supply electrical power to operate power tools on job sites, or to run home appliances during outage; or provide power to remote locations where utility power is unavailable.

This manual contains safety information to make you aware of hazards and risks associated with generator products and how to avoid them. It is important that you read and understand these instructions thoroughly before attempting to start or operate this equipment. Save this original instruction for future reference.

If any portion of this manual is not understood, please contact the nearest authorized dealer for starting, operating and servicing procedures. We also strongly recommend you to instruct any other users who may operate the generator in an emergency needed.

Every effort has been made to ensure that information in this manual is both accurate and current. However Falconpower reserves all rights to change, alter, or otherwise to improve the generator and this documentation at any time without prior notice.

SECTION 1 - SAFETY RULES

Read this manual carefully and become familiar with your generator. Know its applications, its limitations and any hazards involved.

Throughout this brochure, on tags and decals affixed to the generator, DANGER, WARNING, CAUTION and NOTICE marks are used to alert personnel with special instructions about a particular operation that may be hazardous if performed incorrectly, or carelessly. Observe them carefully. Their definitions are as follows:

\[ \text{DANGER} \] indicates a hazard which, if not avoided, will result in death or serious injury.

\[ \text{WARNING} \] indicates a hazard which, if not avoided, could result in death or serious injury.

\[ \text{CAUTION} \] indicates a hazard which, if not avoided, could result in minor or moderate injury.

\[ \text{NOTICE} \] covers some practices which may be not related to personal injury.

Safety Symbols and Meanings

\[ \text{Toxic Fumes} \quad \text{Kickback} \quad \text{Electrical Shock} \]

\[ \text{Fire} \quad \text{Explosion} \quad \text{Operator’s Manual} \]

\[ \text{Moving Parts} \quad \text{Flying Objects} \quad \text{Hot Surface} \]

\[ \text{\textbf{DANGER}} \]

Using a generator indoors CAN KILL YOU IN MINUTES.

Generator exhaust contains carbon monoxide. This is a poison you cannot see or smell.

\[ \text{\textbf{WARNING}} \]

A running engine gives off carbon monoxide, an odorless, colorless, poison gas. Breathing carbon monoxide could result in death, serious injury, headache, fatigue, dizziness, vomiting, confusion, seizures, nausea or fainting.

\[ \text{•} \] Operate this product ONLY outdoors.
\[ \text{•} \] Install a battery operated carbon monoxide alarm near the bedrooms.
\[ \text{•} \] Keep exhaust gas away from entering a confined area through windows, doors, ventilation intakes, or other openings.
\[ \text{•} \] NEVER operate this product inside any building, carport, porch, mobile equipment, marine applications, or enclosure, even if windows and doors are open.
\textbf{WARNING} Starter cord kickback (rapid retraction) will pull hand and arm toward engine faster than you can let go which could cause broken bones, fractures, bruises, or sprains resulting in serious injury.

- When starting engine, pull cord slowly until resistance is felt and then pull rapidly to avoid kickback.
- NEVER start or stop engine with electrical devices plugged in and turned on.

\textbf{WARNING} Fuel and its vapors are extremely flammable and explosive which could cause burns, fire or explosion resulting in death, serious injury and/or property damage.

\section*{WHEN ADDING OR DRAINING FUEL}

- Turn generator engine OFF and let it cool at least 2 minutes before removing fuel cap. Loosen cap slowly to relieve pressure in tank.
- Fill or drain fuel tank outdoors.
- DO NOT overfill tank, Allow space for fuel expansion.
- If fuel spills, wait until it evaporates before starting engine.
- Keep fuel away from sparks, open flames, pilot light, heat, and other ignition sources.
- Check fuel lines, tank, cap and fittings frequently for cracks or leaks. Replace if necessary.
- DO NOT light a cigarette or smoke.

\section*{WHEN STARTING EQUIPMENT}

- Ensure spark plug, muffler, fuel cap, and air cleaner are in place.
- DO NOT crank engine with spark plug removed.

\section*{WHEN OPERATING EQUIPMENT}

- DO NOT operate this product inside any building, carport, porch, mobile equipment, marine applications, or enclosure.
- DO NOT tip engine or equipment at angle which cause fuel to spill.
- DO NOT stop engine by moving choke control to "OFF" position.

\section*{WHEN TRANSPORTING, OR REPAIRING EQUIPMENT}

- Transport/move/repair with fuel tank EMPTY or with fuel valve OFF.
- DO NOT tip engine or equipment at angle which cause fuel to spill.
- Disconnect spark plug wire.

\section*{WHEN STORING FUEL OR EQUIPMENT WITH FUEL IN TANK}

- Store away from furnaces, stoves, water heaters, clothes dryers, or other appliances that have light or other ignition source because they could ignite fuel vapors.

\textbf{WARNING} Generator voltage could cause electrical shock or burn resulting in death or serious injury.

- Use approved transfer equipment to prevent back feed by isolating generator from electric utility workers.
- When using generator for backup power, notify utility company.
- Use a ground fault circuit interrupter in any damp or highly conductive area, such as metal decking or steel work.
- DO NOT touch bare wires or receptacles.
- DO NOT use generator with electrical cords which are worn, frayed, bare or otherwise damaged.
- DO NOT operate generator in the rain or wet weather.
- DO NOT handle generator or electrical cords while standing in water, while barefoot, or while hands or feet are wet.
- DO NOT allow unqualified persons or children to operate or service generator.

\textbf{WARNING} Exhaust heat/gases could ignite combustibles, structures or damage fuel tank causing a fire, resulting in death, serious injury and/or property damage. Contact with muffler area could cause burns resulting in serious injury.

- DO NOT touch hot parts and AVOID hot exhaust gases.
- Allow equipment to cool before touching.
- Keep at least 5 feet (1.5m) of clearance on all sides of generator including overhead.
\textbf{CAUTION} Excessively high operating speeds could result in minor injury and/or generator damage. Excessively low speeds impose a heavy load. • DO NOT tamper with governor spring, links or other parts to increase engine speeds. Generator supplies correct rated frequency and voltage when running at governed speed.

\textbf{WARNING} Unintentional sparking could cause fire or electric shock resulting in death or serious injury.

\textbf{WHEN ADJUSTING OR MAKING REPAIRS TO YOUR GENERATOR}

• Disconnect the spark plug wire from the spark plug and place the wire where it cannot contact spark plug.

\textbf{WHEN TESTING FOR ENGINE SPARK}

• Use approved spark plug tester.
• DO NOT check for spark with spark removed.

\textbf{WARNING} Starter and other rotating parts could entangle hands, hair, clothing, or accessories resulting in serious injury.

• NEVER operate generator without protective housing or covers.
• DO NOT wear loose clothing, jewelry or anything that could be caught in the starter or other rotating parts.
• Tie up long hair and remove jewelry.
• DO NOT modify generator in any way.

\textbf{NOTICE} Exceeding generators wattage/amperage capacity could damage generator and/or electrical devices connected to it.

• DO NOT exceed the generator’s wattage/amperage capacity. See Don’t Overload Generator in the Operation section.

• Start generator and let engine stabilize before connecting electrical loads.
• Turn electrical loads OFF and disconnect from generator before stopping generator.

\textbf{NOTICE} Improper treatment of generator could damage it and shorten its life.

• Use generator only for intended uses.
• If you have questions about intended use, ask dealer or contact local service center.
• Operate generator only on level surfaces.
• DO NOT expose generator to excessive moisture, dust, dirt, or corrosive vapor.
• DO NOT insert any object through cooling slots.
• If connected devices overheat, to turn them off and disconnect them from generator.
• -or electrical output is lost.
• -or equipment sparks, smokes, or emits flames.
• -or unit vibrates excessively.

...to turn them off and disconnect them from generator.
SECTION 2 —GENERAL INFORMATION

2.1 UNPACKING

• Set the carton on a rigid, flat surface.
• Remove everything from carton except generator.
• Open carton completely by cutting each corner from top to bottom.
• Leave generator on carton to install wheel kit.

2.1.1 PACKING CONTENTS

1-Owner’s Manual
2-Wheels
1-Handle Assembly
2-Wheel Axle
1-Hardware Bag
(including 1-Spark Plug Socket; 1-Extension Housing)

The above contents in this manual are for reference only and do not represent for any specific model.

2.2 ASSEMBLY

The generator requires some assembly prior to using it.

2.2.1 ASSEMBLING THE ACCESSORY KIT

The wheels are designed to the unit to greatly improve the portability of the generator.

⚠️ NOTE: The wheels are Not intended for over-the-road use.

1. Refer to Figures to install wheels as shown.
• Slide the axle through the frame brackets.
• Slide on the hub, wheel and flat washer then insert the cotter pin through the wheel axle hole.
• Bend the cotter pin tabs outward to lock the pin in place.

2. The wheel bumpers as shown.
• Insert an M6 bolt through the rubber bumper and insert an M8 bolt through the bottom of the bumper bracket. Secure the bolt with an M8 flange nut.
• Install an M8 bolt through the generator frame and through top of the bumper bracket. Secure the bolt with an M8 flange nut.

3. Refer to following Figure to install the handle assembly as shown.
• Insert the handle bracket onto the generator frame and secure with two M8 bolts and two M8 flange nuts.
• Align the handle assembly holes with the handle bracket holes and secure with one M8 bolt and one M8 flange nut.

2.3 How to use handle

When lift or put down the handle, must open the locating pin.
SECTION 3 — FEATURES AND CONTROLS

Read this Operator’s Manual and safety rules before operating your generator. Compare the illustrations with your generator, to familiarize yourself with the locations of various controls and adjustments. Save this manual for future reference.

⚠️ NOTICE
we reserve the right to change the panel according to different countries. battery and digital hour meter are optional.
SECTION 4 — PREPARATION BEFORE OPERATION

4.1 ADDING ENGINE OIL
Please add properly oil before starting the generator. Use a special additives. Select the oil’s Viscosity grade accordingly to the expected operating temperature (also see chart).

Above 40°F, use SAE 30
Between 10°F to 40°F, please use 10W-30.
Below 10°F, use synthetic 5W-30.

⚠️ NOTICE Improper treatment of generator could damage it and shorten its life. DO NOT attempt crank or start the engine before it has been properly serviced with the recommended oil. This could result in an engine failure.
- Place generator on a flat, level surface.
- Clean area around oil fill and remove oil fill cap and remove oil cap and dipstick. Wipe dipstick clean.
- Slowly fill oil into engine through the oil filter until it reaches the full mark on the dipstick. Stop filling occasionally to check oil level. Be careful do not over fill.
- Install oil fill cap and fasten the cap properly.
- Check engine oil level before starting each time thereafter.

4.2 ADDING FUEL
⚠️ DANGER Never fill tank indoors. Never fill fuel tank when engine is running or hot. Turn generator OFF and allow engine to cool entirely before filling fuel tank. Avoid spilling gasoline on HOT engine. Keep fuel away from sparks, open flames, pilot lights, heat, and other ignition sources. DO NOT light a cigarette or smoke when filling the fuel tank. Fuel is highly FLAMMABLE and its vapors are EXPLOSIVE.

- Use regular UNLEAD gasoline with the generator engine. Do not use any fuel with more than 10% added ethanol, and never use E85 fuel.
- Do not mix oil with gasoline.
- Install fuel cap and wipe up any spilled gasoline.

⚠️ CAUTION Do not overfill the fuel tank.
- Allow space for fuel expansion.
- If the fuel tank is overfilled, fuel can overflow onto a HOT engine and cause FIRE or EXPLOSION. If fuel spills, wait until it evaporates before starting engine. Check fuel lines, tank, cap and fittings frequently for cracks or leaks. Replace if necessary.

IMPORTANT: It is important to prevent gum deposits from forming in fuel system parts such as the carburetor, fuel hose or tank during storage. Alcohol-blended fuels (called gasohol), ethanol or methanol) can attract moisture, which leads to separation and formation of acids during storage. Acidic gas can damage the fuel system should be emptied before storage for 30 days or longer. See the “Storage” section. Never use engine or carburetor cleaner products in the fuel tank as permanent damage may occur.

4.3 GROUNDING THE GENERATOR
The national Electrical Code requires that the frame and external electrically conductive part of this generator be properly connected to an approved earth ground.
Proper grounding of the generator will help prevent electrical shock in the event of ground fault condition in the generator or in connected electrical devices. Proper grounding also helps dissipate static electricity, which often builds up in ungrounded devices.

SECTION 5 — OPERATION

5.1 STARTING THE ENGINE

⚠ WARNING Never start or stop engine with electrical devices plugged into the receptacles and devices turned on.

Unplug all electrical loads from the unit's receptacles before starting the engine. Make sure the unit is in a level position.

Turn the engine switch to "On" position.

Turn fuel switch to "On" position.
Move engine choke lever to the OFF position.

For Recoil start, firmly grasp the recoil handle and pull slowly until increased resistance is felt. Pull rapidly up and away.

When engine starts, move choke lever to 1/2-CHOKExposition until engine runs smoothly and then fully into ON position. If engine stalls, move choke back to 1/2-CHOKExposition until engine running smoothly and then fully into ON position again.

⚠️ NOTICE If battery is unavailable, use manual starting instructions.

⚠️ NOTICE If engine is choking and running roughly, move choke lever to the OFF position and repeat starting instructions.

⚠️ WARNING Starter cord kickback (rapid retraction) will pull hand and arm toward engine faster than you can let go which could cause broken bones, fractures, bruises, or sprains resulting in serious injury. When starting engine, pull cord slowly until resistance is felt and then pull rapidly to avoid kickback. Never start or stop engine with electrical devices plugged in and turned on.

⚠️ NOTICE If engine fails to start after 3 pulls, or if unit shut down during operation, make sure unit is on a level surface and check for proper oil level in crankcase. This unit may be equipped with a low oil protection device. If so, oil must be checked at proper level for engine to start and run.

⚠️ WARNING Exhaust heat/ gases could ignite combustible, structures or damage fuel tank causing a fire, resulting in death, serious injury and/or property damage. Contact with muffler area could cause burn resulting in serious injury. DO NOT touch hot parts and AVOID hot exhaust gases. Allow equipment to cool before touching. Keep at least 5 feet (152 cm) of clearance on all sides of generator including overhead. Contact the original equipment manufacturer, retailer, or dealer to obtain a spark arrester designed for the exhaust system installed on this engine. Replacement parts must be the same and installed in the same position as the original parts.
IMPORTANT  Do not overload the generator.  Also, do not overload individual panel receptacles. These outlets are protected against overload with push-to-reset-type circuit breakers. If amperage rating of any circuit breaker is exceeded, that breaker opens and electrical output to that receptacle is lost.

5.2 CONNECTING ELECTRICAL LOADS

- Let engine runs stable and warm up for a few minutes after starting.
- Plug in and turn on the electrical loads.
- Add up the rated watts (or amps) of all loads to be connected at one time. This total should not be greater than (a) the rated wattage/ampere capacity of the generator or (b) circuit breaker rating of the receptacle supplying the power.

⚠️ NOTICE  Start generator and let engine stabilize before connecting electrical loads. Connect electrical loads in OFF position then turn ON for operation. Turn electrical loads OFF and disconnect from generator before stopping generator.

⚠️ NOTICE  Exceeding generator's wattage/ampere capacity could damage generator and/or electrical devices connected to it. DO NOT exceed the generator's wattage/ampere capacity.

- Overloading a generator in excess of its rated wattage capacity can result in damage to the generator and to connected electrical devices. Observe the following to prevent overloading the unit:
- Add up the total wattage of all electrical devices to be connected at one time. This total should NOT be greater than the generator’s wattage capacity.

The rated wattage of lights can be taken from light bulbs. The rated wattage of tools, appliances and motors can usually be found on a data label or decal affixed to the devices. If the appliance, tool or motor does not give wattage, multiply volts times ampere rating to determine watts (volts x amps = watts).

Some electric motors, such as induction types, require about three times more watts of power for starting than for running. This surge of power lasts only a few seconds when starting such motors. Make sure to allow for high starting wattage when selecting electrical devices to connect to the generator:
- Figure the watts needed to start the largest motor.
- Add to that figure the running watts of all other connected loads.

The wattage reference guide is provided to assist in determining how many items the generator can operate at one time.

5.3 STOPPING THE ENGINE

Shut off all loads then unplug the electrical loads from generator panel receptacles. Never start or stop the engine with electrical devices plugged in and turned on.

Let engine run at no-load for several minutes to stabilize the internal temperatures of engine and generator.
Move ON/OFF switch to OFF position.
Close fuel valve.

5.4 LOW OIL LEVEL SHUTDOWN SYSTEM

The engine is equipped with a low oil level sensor that shuts down the engine automatically when the oil level drops below a specified level. If the engine shuts down by itself and the fuel tank has enough gasoline, check engine oil level.

5.5 HIGH ALTITUDE

At altitudes over 5,000 feet (1524 meters), a minimum 85 octane / 85 (89 RON) gasoline is acceptable. To remain emissions compliant, high altitude adjustment is required. Operation without this adjustment will cause decreased performance, increased fuel consumption, and increased emissions. See an authorized dealer for high altitude adjustment information. Operation of the engine at altitudes below 2,500 feet (762 meters) with the high altitude kit is not recommended.
SECTION 6 — MAINTENANCE

6.1 MAINTENANCE SCHEDULE

Follow the calendar intervals shown below. More frequent service is required when operating in adverse conditions.

<table>
<thead>
<tr>
<th>First 5 Hours</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>• Change engine oil</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Every 8 Hours or Daily</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Clean debris</td>
</tr>
<tr>
<td>• Check engine oil level</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Every 25 Hours or Yearly</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Clean engine air filter</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Every 50 Hours or Yearly</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Change engine oil</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Yearly</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Replace engine air filter</td>
</tr>
<tr>
<td>• Service fuel valve</td>
</tr>
<tr>
<td>• Service spark plug</td>
</tr>
<tr>
<td>• Check muffler and spark arrester</td>
</tr>
<tr>
<td>• Clean cooling system</td>
</tr>
</tbody>
</table>

6.2 GENERAL RECOMMENDATIONS

The warranty of the generator does not cover items that have been subjected to operator abuse or negligence. To receive full value from the warranty, the operator must maintain the generator as instructed in this manual.

Some adjustments will need to be made periodically to properly maintain the generator.

All adjustments in the Maintenance section of this manual should be made at least once each season. Follow the requirements in the “Maintenance Schedule”.

⚠️ NOTE Once a year replace the spark plug and replace the air filter. A new spark plug and clean air filter assure proper fuel-air mixture and help the engine run better and last longer.

6.2.1 GENERATOR MAINTENANCE

Generator maintenance consists of keeping the unit clean and dry. Operate and store the unit in a clean dry environment where it will not be exposed to excessive dust, dirt, moisture or any corrosive vapors. Cooling air slots in the generator must not become clogged with snow, leaves, or any other foreign material.

Check the cleanliness of the generator frequently and clean when dust, dirt, oil, moisture or other foreign substances are visible on its exterior surface.

⚠️ CAUTION Never insert any object or tool through the air cooling slots, even if the engine is not running.

⚠️ NOTE DO NOT use a garden hose to clean generator. Water can enter the engine fuel system and cause problems. In addition, if water enters the generator through cooling air slots, some water will be retained in voids and crevices of the rotor and stator winding insulation. Water and dirt buildup on the generator internal windings will eventually decrease the insulation resistance of these windings.

6.2.2 TO CLEAN THE GENERATOR

• Use a damp cloth to wipe exterior surfaces.

• A soft, bristle brush may be used to remove dirt, oil, etc.

• A vacuum cleaner may be used to pick up loose dirt and debris.

• Low pressure air (not to exceed 25 psi) may be used to blow away dirt. Check cooling air slots and openings on the generator. These openings must be kept clean and unobstructed.

6.2.3 ENGINE MAINTENANCE

⚠️ DANGER When working on the generator, always disconnect spark plug wire from spark plug and keep wire away from spark plug.
6.2.4 CHANGING THE OIL

Change the oil after the first five hours of operation, then every 20 hours thereafter. If running this unit under dirty or dusty conditions, or in extremely hot weather, change the oil more often.

⚠️ CAUTION Hot oil may cause burns. Allow engine to cool before draining oil. Avoid prolonged or repeated skin exposure to used oil. Thoroughly wash exposed areas with soap.

Follow below instructions to change the oil while the engine is cooling down:
- Clean area around oil drain plug.
- Remove oil drain plug from engine to drain oil completely into a suitable container.
- When oil has completely drained, install oil drain plug and fasten securely.
- Fill engine with recommended oil. (See “Before Starting the Generator” for oil recommendations).
- Wipe up any spilled oil.
- Dispose used oil at a proper collection center.

6.2.5 REPLACING THE SPARK PLUG

Use spark plug F6TC, BPR4ES or Champion RN14YC. Replace the plug once each year. This will help the engine start easier and run better.
- Stop the engine and pull off the spark plug wire.
- Clean the area around the spark plug and remove it from the cylinder head.
- Set the spark plug’s gap to 0.70-0.80 mm (0.028-0.031 in.). Install the correctly gapped spark plug into the cylinder head and torque to 15 ft/lbs.

6.2.6 SPARK ARRESTOR

- Shut off generator and allow the engine and muffler to cool down completely before servicing spark arrestor (located on the back of the muffler).
- Remove the clamp and spark arrestor screen.
- Clean the spark arrestor screen with a small wire brush.
- Replace the spark arrestor if it is damaged.
- Install the Spark arrestor reversely.

6.3 SERVICE AIR FILTER

The engine will not run properly and may be damaged if using a dirty air filter. Replace the air filter once a year. Clean or replace more often if operating under dusty conditions.
- Remove air filter cover.
- Wash in soapy water. Squeeze filter dry in clean cloth (DO NOT TWIST).
- Clean air filter cover before re-installing it.
- May drop a bit of engine oil to avoid ice blocked during winter season.
6.4 VALVE CLEARANCE

After the first 50 hours of operation, check the valve clearance in the engine and adjust if necessary.

Important: If feeling uncomfortable about doing this procedure or the proper tools are not available, please take the generator to the nearest service center to have the valve clearance adjusted. This is a very important step to ensure longest life for the engine.

6.5 GENERAL

The generator should be started at least once every seven days and be allowed to run at least 30 minutes. If this cannot be done and the unit must be stored for more than 30 days, use the following information as a guide to prepare it for storage.

⚠️ DANGER NEVER store engine with fuel in tank indoors or in enclosed, poorly ventilated areas where fumes may reach an open flame, spark or pilot light as on a furnace, water heater, clothes dryer or other gas appliance.

⚠️ CAUTION Avoid spray from spark plug holes when cranking engine.

⚠️ DANGER Drain fuel into approved container outdoors, away from open flame. Be sure engine is cool. Do not smoke.

6.6 OTHER STORAGE TIPS

• Do not store gasoline from one season to another.
• Replace the gasoline can if it starts to rust. Rust and/or dirt in the gasoline will cause problems with the carburetor and fuel system.
• If possible, store the unit indoors and cover it to give protection from dust and dirt. BE SURE TO EMPTY THE FUEL TANK.
• If it is not practical to empty the fuel tank and the unit is to be stored for some time, use a commercially available fuel stabilizer added to the gasoline to increase the life of the gasoline.
• Cover the unit with a suitable protective cover that does not retain moisture.

⚠️ DANGER NEVER cover the generator while engine and exhaust area are warm.

SECTION 7 — STORAGE

It is important to avoid gum deposits from forming in essential fuel system parts such as the carburetor, fuel hose or tank during storage. Also, experience indicates that alcohol-blended fuels (called gasohol, ethanol or methanol) can attract moisture, which leads to separation and formation of acids storage. Acidic gas can damage the fuel system of an engine while in storage.

To avoid engine problems, the fuel system should be emptied before storage of 30 days or longer, as follows:

• Remove all gasoline from the fuel tank.
• Start and run engine until engine stops from lack of fuel.
• While engine is still warm, drain oil from crankcase. Refill with recommended grade.
• Remove spark plugs and pour about 1/2 ounce (15 ml) of engine oil in the cylinders. Cover spark plug hole with rag. Pull the recoil starter a couple times to lubricate the piston rings and cylinder bore.

• Install and tighten spark plugs. Do not connect spark plug wires.
• Clean the generator outer surfaces. Check that cooling air slots and openings on generator are open and unobstructed.
• Store the unit in clean, dry place.
WARRANTIES

KOHLER EMISSION CONTROL DEFECTS WARRANTY COVERAGE

Spark ignited small off-road engines are warranted relative to emission control parts defects for a period of two (2) years, subject to the provisions stated below. If any emission related part on your engine is defective, the part will be repaired or replaced by KOHLER. The warranty period begins on the date the product is delivered to the initial owner.

OWNER'S WARRANTY RESPONSIBILITY

As the spark ignited small off-road engine owner, you are responsible for the maintenance required, what are listed in the owner's manual. KOHLER recommends that you retain all receipts covering maintenance on your spark ignited small off-road engine, but KOHLER cannot deny warranty solely for the lack of receipts or for your failure to ensure the performance of all scheduled maintenance.

As the owner of a spark ignited small off-road engine, you should however be aware that KOHLER may deny you warranty coverage if your spark ignited small off-road engine or part has failed due to abuse, neglect, improper maintenance or unapproved modifications.

You are responsible for presenting your spark ignited small off-road engine to an authorized service center as soon as a problem exists. The undisputed warranty repairs should be completed in a reasonable period of time, not to exceed 30 days. For the location of an authorized service center and any questions you may have regarding your warranty rights and responsibilities, you should call our parts and technical support group toll free at 800-544-2444.

The emission warranty is a defects warranty and defects are judged on normal engine performance. The warranty is not related to an in-use emission test.

EMISSION CONTROL SYSTEM WARRANTED PARTS

Coverage under this warranty extends only to the parts listed below (the emission control system parts) to the extent that these parts were present on the engine purchased.

Fuel Metering System
Carburetor and/or internal parts
Intake manifold
Evaporative System
Fuel tank, Fuel cap, and tether
Air Induction System
Air cleaner
Intake manifold
Exhaust System
Exhaust manifold
Ignition System
Flywheel magneto
Ignition coil assembly
Spark plug
Crankcase Emission Control System
Crankcase breather tube
